PROFILE

Full-stack software engineer with 6+ years of experience building web applications, CRM systems, and automation platforms. Combines Laravel and modern JavaScript development with database optimization, modular architecture, and AI agent workflows. Builds GitLab CI/CD pipelines and Docker-based application environments.

EXPERIENCE

Full-Stack Developer **Feb 2025 - Present**

Web Negah | Tehran, Iran

- Build web applications, CRM systems, and progressive web apps across client projects.
- Develop multi-agent AI systems and shared documentation frameworks to support team delivery.
- Create reusable, modular packages to streamline new project development.

Lead Full-Stack Developer **Oct 2019 - Jul 2025**

Iran Technology | Tehran, Iran

- Led development of Eventoment, the company's flagship event-management social platform. eventoment.com
- Reduced a critical flow from approximately 900 database queries to 30 through eager loading and query optimization.
- Built the Nuxt.js frontend and GitHub Actions CI/CD pipeline for Eventoment.
- Optimized frontend bundles, server infrastructure, and databases to improve performance and scalability.

SELECTED PROJECTS

Steel Rizan | Built a custom-formula engine powering pricing for an industrial operations platform. Web Negah.

Safar 360 | Built a multi-tenant ticketing core for agencies selling air, rail, and bus travel. Iran Technology.

OnYar | Developed a health-content platform using nwidart modular architecture and per-module testing. Web Negah.
